Bank transfer: *IBAN FR76 1660 7000 6168 1217 0442 532 SWIFT (BIC): CCBPFRPPPPG*
credit card- check

TERMINOLOGY

The recent adoption of the new term “**Photobiomodulation Therapy**” symbolizes the uniqueness of this therapy. **EMALT** and his partner **NAALT** endorse and promote the use of this terminology. We defines the photobiomodulation as “ a form of light therapy that utilises non-ionising form of light sources including LASERs, LEDs, and wide-band light in the visible and invisible spectrums. It is a non-thermal process involving endogenous chromophores eliciting photo photophysical and photo medical events at various biological scales. This process obtains beneficial therapeutic results, including but not limited to the reduction of pain or inflammation, immunomodulation, the improvement of wound healing and tissue regeneration”.
